From Booklist

In this diverse gathering of optical effects and illusions, Gifford offers a mix of classic and relatively recent examples. Following quick tours of the eye and brain, he presents images that disappear in our optical blind spot, seem to spin or drift, contain illusory differences in color, or leave afterimages of various sorts. He also covers false and forced perspectives in photography and other arts, illusory faces such as the one supposedly spotted on the surface of Mars, and stereograms. A description of what viewers will (or are at least supposed to) see and, often, the identity of the artist or scientist who discovered the effect either accompany each image or are mentioned in the appended material. Extra features include a glossary, an index, and instructions for creating a simple pinhole camera and a trick photograph. A broad overview of ways in which the eye can be fooled. EYE BENDERS: THE SCIENCE OF SEEING AND BELIEVING BY CLIVE GIFFORD PDF

Kids will be left astounded by this book of crazy optical illusions, and they'll be amazed as they learn the science behind how our brain and eyes work to together to fool us all the time. The fun begins with an engaging look at the biology behind the brain and eyes, complete with cool diagrams and a colorful "map" of the brain. Then they'll get to the core of the illusions, learning why some printed pictures appear to swirl madly on the page, how two colors can appear to be different when they are actually the same, how our eyes can pick out complete images in random pattern, and much more. From color conundrums to plays on perspective, the illusions in this book will leave readers wondering if they can ever really believe what they see.

This Book Will Boggle Your Eyes!

By Dad of Divas

If you enjoy optical illusions and mind/eye puzzles, this is a book for for your enjoyment. The book is filled with not only optical illusions, but also the specific biology behind what happens with your eyes and brain when you see an illusion.

The "blind spot" activities on pages 20-21 were interesting. I was not aware how the blind spot in the back of our eyes affect our vision.

There were other informational entries about the brain, nervous system, and specific parts of your eye.

I know you will enjoy the activities in this book. The explanations are worth taking the time to read too.
